

Attention Consumers with Off Peak

This winter, the off-peak heat programs will be experiencing an anticipated 300 hours of total control. If you are on the dual heat off peak program, please remember that this program has unlimited potential of control. Minnkota Power Cooperative is Clearwater-Polk Electric's wholesale power supplier. They monitor the system and control loads when necessary. *Please be prepared to have your electric heat controlled for extended lengths of time and have your backup system in good working order.*

You can access control information by visiting CPE's website at www.clearwater-polk.com and clicking on the Load Management option at the top of the homepage. This link includes what Minnkota's control plans are, what the current status of the systems are (on or off) and what the control history has been. The control codes for your specific ripple control Load Group can be obtained by calling Clearwater-Polk at 1-888-694-3833 or (218)-694-6241 during the business hours of 7:00am – 4:30pm Monday-Friday.
